

Session three - 1.5 CEUs - Thursday, November, 19, 2020 7:00 PM- 8:00 PM

What's the point? Picking the right strategy for the right reasons

It's so easy to want a simple, one-size-fits all solution when it comes to oral disease. What works for one, simply not appeal to or work for another. And what is the goal? Are you trying to create a comfortable mouth feel, adjust the oral pH level, stimulate saliva, remineralize damaged tooth structure, reduce dentinal hypersensitivity, or foster the growth of healthy oral microbes? There are many products and strategies that will help achieve a wide range of goals.

- Find out which products improve salivary flow and quality
- Learn about options: xylitol, arginine, natural oils and lipids, fluoride, polymers, bicarbonates
- Discover how and why to use multiple strategies and products
- Develop a surefire way to introduce product options
- Create a conversation about alternative biofilm disruption options

Spotlight on the new canaries in the coal mine

Would it surprise you to know that today's healthcare providers are at increased risk for oral disease? Current research indicates that dehydration is the top complaint when wearing multiple layers of PPE all day long. No one wants to spend their day off in the dental chair dealing with a caries outbreak or worse yet, ending up in an emergency room after passing out at work.

- Understand the danger of chronic dehydration
- Discover tools to open a dialogue with your employer and family
- Learn tips to stay hydrated
- Develop a strategy for breaks
